

Thank you for purchasing S100 Series Extension I/O.

## SAFETY PRECAUTIONS

- Always follow safety instructions to prevent accidents and potential hazards from occurring.
- Safety precautions are classified into “WARNING” and “CAUTION” and their meanings are as follows:

 **WARNING** Improper operation may result in serious personal injury or death.

 **CAUTION** Improper operation may result in slight to medium personal injury or property damage

- The indicated illustrations on the product and in the manual have the following meanings.

 Danger may be present. Read the message and follow the instructions carefully.

 Particular attention should be paid because danger of an electric shock may be present.

- Keep operating instructions handy for quick reference.
- Read the operating instructions carefully to fully understand the functions of the S100 series and to use it properly.

## CAUTION

- **Be cautious, when handling the CMOS components of the communication module.**  
Static may lead to malfunctioning of the product.
- **Turn off the inverter power, when changing the communication cable.**  
Otherwise, you may damage the module or a communication error may occur.
- **Make sure to insert the Option board connector to the inverter precisely.**  
Otherwise, you may damage the module or a communication error may occur.
- **Check the parameter unit before setting up the parameter.**  
Otherwise, a communication error may occur.

| 5.15.2 Config Mode (CNF).....   | 89 |

# Chapter 1. Basic Information & Precautions

Before installation of S100 Extension I/O, this chapter explains basic information and precautions  
(The Extension I/O is supported by the product S/W V2.1 or higher.)

## 1.1 Characteristics

Additional terminals

- Digital Input : 3ea
- Digital Output : 2ea(1FormC)
- Analog Input : 2ea
- Analog Output : 1ea

## 1.2 Components

S100 Extension I/O consists of following items.

- S100 Extension I/O : 1ea
- User manual : 1ea
- Brass supporter(M3xL17.3) : 1ea
- Brass supporter(M3xL23) : 1ea
- Screw(M3xL8) : 2ea
- Other parts

If you find damaged or missing parts, please contact LSIS office(refer to the end of this manual).

## Chapter 2. Specifications

### 2.1 External Dimension

## 2.2 Input and Output Specification

| Function  |                                       | Label      | Name  | Description  |
|-----------|---------------------------------------|------------|---|--|
| IN<br>PUT | Multi-function terminal configuration | P8 ~ P10   | Multi-function Input 8~10                           | Configurable for multi-function input terminals.   |
|           |                                       | CM         | Common Sequence                                     | Common terminal for analog terminal inputs and outputs.  |
|           | Analog input configuration            | V3         | Voltage input for frequency reference input         | Used to setup or modify a frequency reference via analog voltage input terminal.<br><ul style="list-style-type: none"> <li>• Unipolar: 0–10V (12V Max.)</li> <li>• Bipolar: -10–10V (<math>\pm</math>12V Max.)</li> </ul>  |
|           |                                       | I4         | Voltage/current input for frequency reference input | Used to setup or modify a frequency reference via analog voltage or current input terminals.<br>Switch between voltage (V4) and current (I4) modes using a control board switch (SW2).<br><br>V4 Mode:<br><ul style="list-style-type: none"> <li>• Unipolar: 0–10V (12V Max.)</li> </ul> I4 Mode<br><ul style="list-style-type: none"> <li>• Input current: 4–20mA</li> <li>• Maximum Input current: 24mA</li> <li>• Input resistance: 249<math>\Omega</math></li> </ul> |
|           | Analog Output                         | AO3        | Voltage/Current Output                              | devices: output frequency, output current, output voltage, or a DC voltage.<br>Operate switch (SW3) to select the signal output type (voltage or current) at the AO terminal.<br>Output Signal Specifications:<br><ul style="list-style-type: none"> <li>• Output voltage: 0–10V</li> <li>• Maximum output voltage/current: 12V/10mA</li> <li>• Output current: 0–20mA</li> <li>• Maximum output current: 24mA</li> <li>• Factory default output: Frequency</li> </ul>   |
|           | Digital Output                        | CM         | Common Sequence                                     | Common terminal for analog terminal inputs and outputs.  |
|           |                                       | A3, C3, B4 | Fault signal output                                 | Sends out alarm signals when the inverter's safety features are activated (AC 250V <1A, DC 30V < 1A).<br>Fault condition: A3 and C3 contacts are connected (B3 and C3 open connection)<br>Normal operation: B3 and C3 contacts are connected (A3 and C3 open connection)   |
|           |                                       | A4, C4, B4 | Fault signal output                                 | Sends out alarm signals when the inverter's safety features are activated (AC 250V <1A, DC 30V < 1A).<br>Fault condition: A4 and C4 contacts are connected (B4 and C4 open connection)<br>Normal operation: B4 and C4 contacts are connected (A4 and C4 open connection)   |

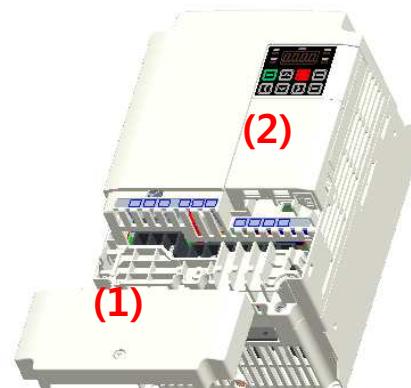

## Chapter 3. Installation

### 3.1 Installation of S100 Extension I/O

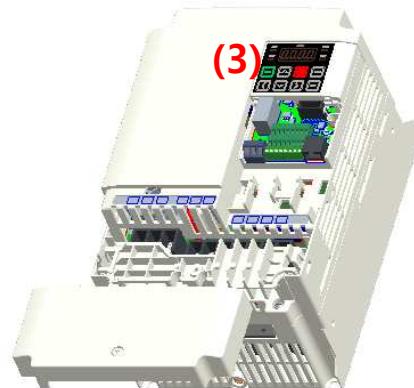

Warning) Connect a communication network after the power supply of the S100 inverter must be off. If the power supply is plugged when Extension I/O is removed, the S100 inverter will be damaged entirely. Take off Extension I/O from the product after the power supply is totally discharged.

In case of LSLV0004S100-2EXNNS, LSLV0008S100-2EXNNS, LSLV0004S100-4EXFNS, LSLV0008S100-4EXFNS, it is impossible to do wiring of main source after assembly of Extension I/O. Please assemble Extension I/O after wiring of main source. If you need to using built-in I/O terminals, please do wiring of the terminals before assembly of extension I/O

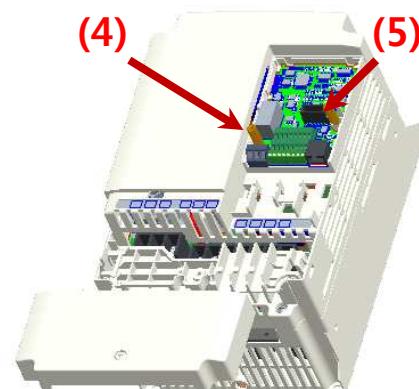

- Take off the power supply cover and the I/O cover((1), (2)) from a dedicated S100 inverter for communication.

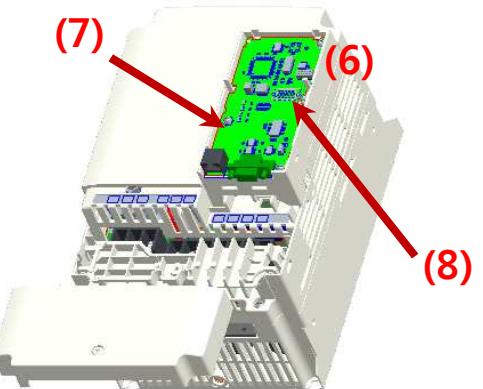

- Take off the keypad (3).

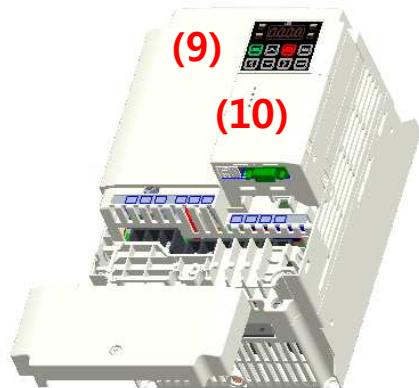

- Loosen a screw from the I/O board and fasten the prepared brass bar (M3xL23) to (4), and (M3xL17.3) to (5).

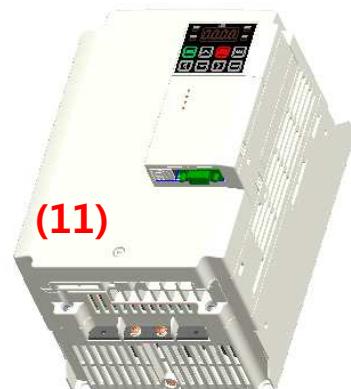

- Mount the Extension I/O(6) and fasten the removed screw(7) and the included screw(8).

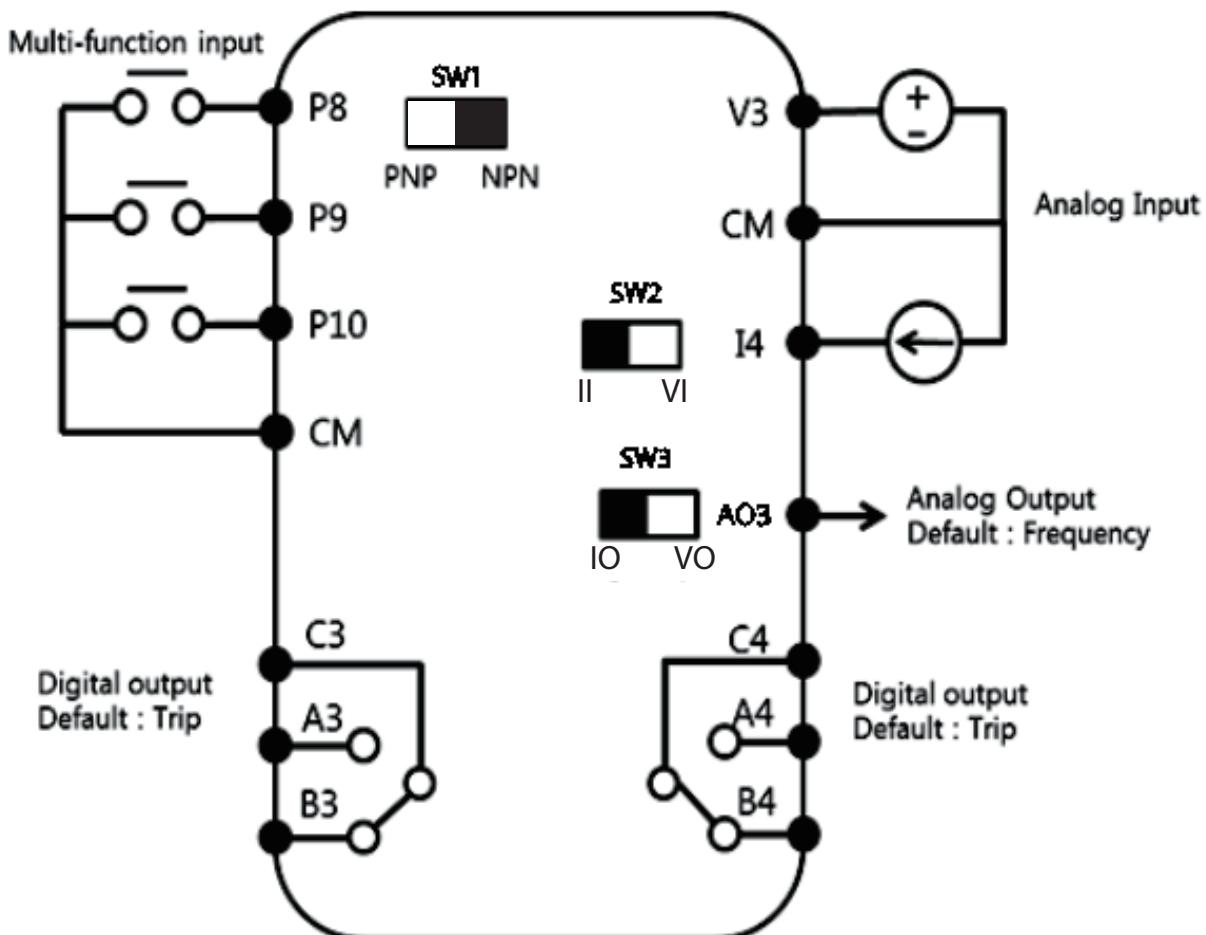

- Install the keypad (9) at first and the Extension I/O cover(10) in order.

- Install the power supply cover(11) again  
And the installation is completed.

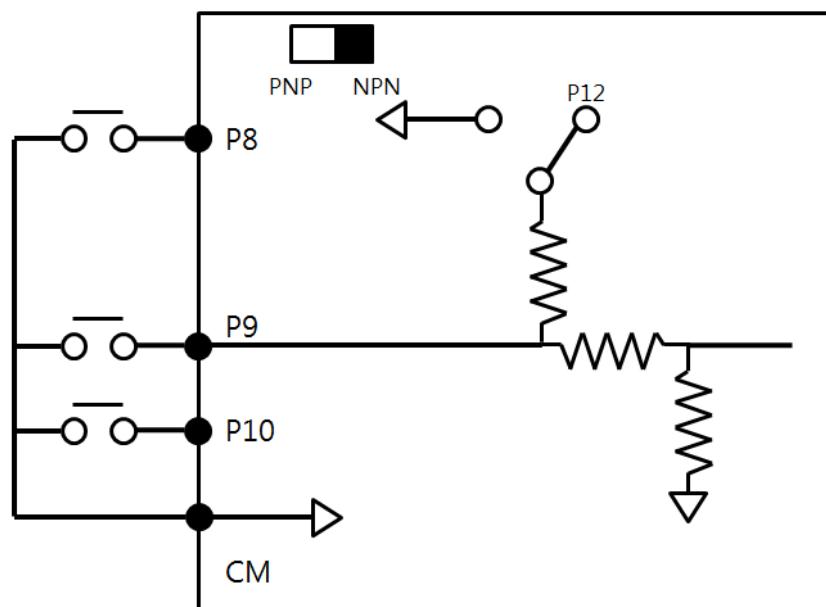

### 3.2 Control Terminal Wiring

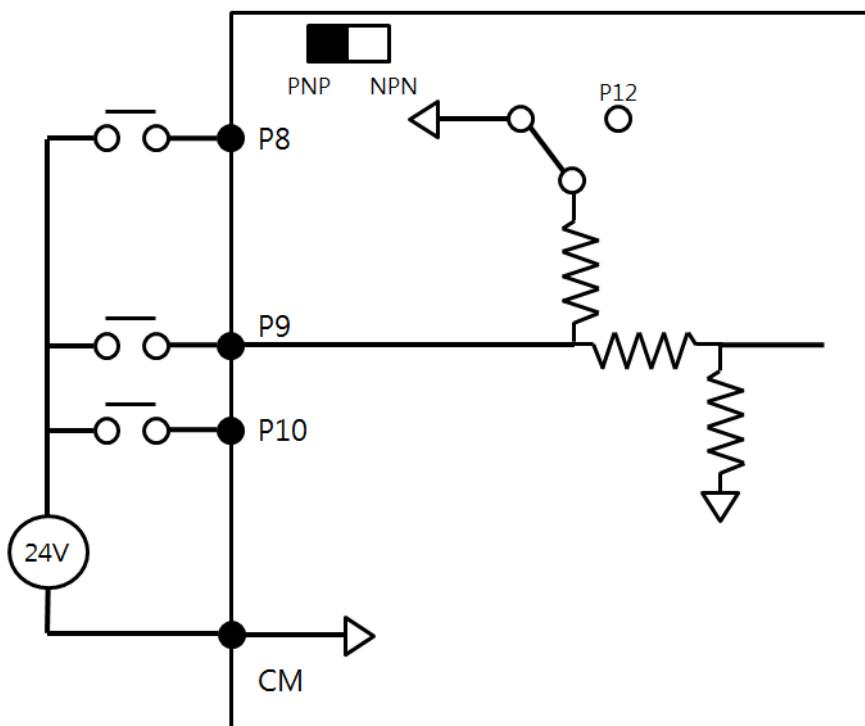

- NPN Mode (Sink)

Select NPN using the PNP/NPN selection switch (SW1). Note that the factory default setting is NPN mode. CM is the common ground terminal for all analog inputs at the terminal, and P12 is 12V internal source.

- PNP Mode (Source)

Select PNP using the PNP/NPN selection switch (SW1). Note that the factory default setting is NPN mode. CM is the common ground terminal for all analog inputs at the terminal, and P12 is 12V internal source. If you are using an external Voltage source, build a circuit that connects the external source (-) and the CM terminal In case of PNP, you should apply more than 3V source for on-state and less than 2V for off-state.

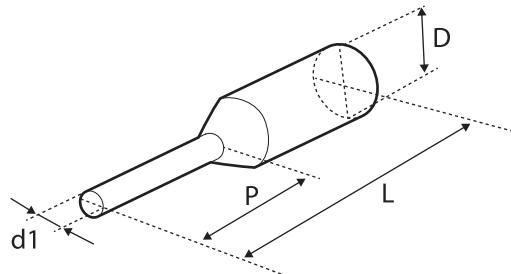

### 3.3 Signal (Control) Cable Specifications

| Terminals            | Signal Cable                                     |     |   |     |
|----------------------|--|-----|---|-----|
|                      | Without Crimp Terminal Connectors<br>(Bare Wire) |     | With Crimp Terminal Connectors<br>(Bootlace Ferrule)) |     |
|                      | mm <sup>2</sup>                                  | AWG | mm <sup>2</sup>                                       | AWG |
| P8~P10/CM/V3/I4 /AO3 | 0.75   | 18  | 0.5   | 20  |
| A3/B3/C3<br>A4/B4/C4 | 1.0  | 17  | 1.5   | 15  |

- **Preinsulated Crimp Terminal Connectors (Bootlace Ferrule) .**

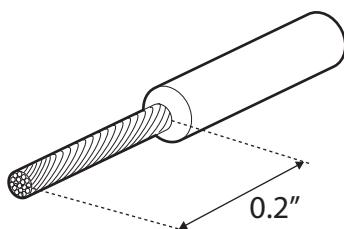

Use preinsulated crimp terminal connectors to increase reliability of the control terminal wiring. Refer to the specifications below to determine the crimp terminals to fit various cable sizes.

| P/N      | Cable Spec |                 | Dimensions (inches/mm) |            |            |             | Manufacturer   |
|----------|------------|-----------------|------------------------|------------|------------|-------------|--|
|          | AWG        | mm <sup>2</sup> | L*                     | P          | d1         | D           |  |
| CE002506 | 26         | 0.25            | 10.4                   | 0.4 / 6.0  | 0.04 / 1.1 | 0.1 / 2.5   | JEONO<br>(Jeono Electric,<br><a href="http://www.jeono.com/">http://www.jeono.com/</a> ) |
| CE002508 |            |                 | 12.4                   | 0.5 / 8.0  |            |             |  |
| CE005006 | 22         | 0.50            | 12.0                   | 0.45 / 6.0 | 0.05 / 1.3 | 0.125 / 3.2 |  |
| CE007506 | 20         | 0.75            | 12.0                   | 0.45 / 6.0 | 0.06 / 1.5 | 0.13 / 3.4  |  |

\* If the length (L) of the crimp terminals exceeds 0.5" (12.7mm) after wiring, the control terminal cover may not close fully.

To connect cables to the control terminals without using crimp terminals, refer to the following illustration detailing the correct length of exposed conductor at the end of the control cable.

### Note

While making wiring connections at the control terminals, ensure that the total cable length does not exceed 165ft (50m).

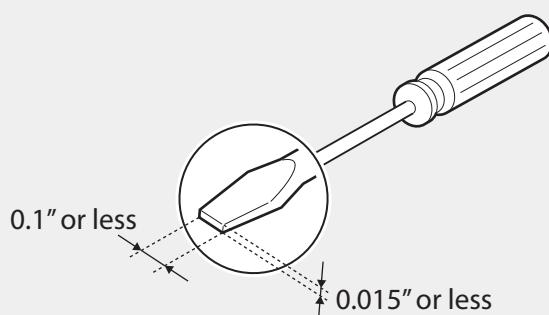

Ensure that the length of any safety related wiring does not exceed 100ft (30m).

Ensure that the cable length between an LCD keypad and the inverter does not exceed 10ft (3.04m). Cable connections longer than 10ft (3.04m) may cause signal errors.

Use ferrite material to protect signal cables from electro-magnetic interference.

Take care when supporting cables using cable ties, to apply the cable ties no closer than 6 inches from the inverter. This provides sufficient access to fully close the front cover.

When making control terminal cable connections, use a small flat-tip screw driver (0.1in wide (2.5mm) and 0.015in thick (0.4mm) at the tip).

# Chapter 4. Basic Features

## 4.1 Basic function

| Basic Function  | Example  |
|---|--|
| Frequency reference source configuration for the terminal block (input voltage) | Configures the inverter to allow input voltages at the terminal block (V3, V4) and to setup or modify a frequency reference.         |
| Frequency reference source configuration for the terminal block (input current) | Configures the inverter to allow input currents at the terminal block (I4) and to setup or modify a frequency reference.             |
| Multi-step speed (frequency) configuration                                      | Configures multi-step frequency operations by receiving an input at the terminals defined for each step frequency.                   |
| Multi-stage Acc/Dec time configuration using the multi-function terminal        | Configures multi-stage acceleration and deceleration times for a motor based on defined parameters for the multi-function terminals. |
| Command source configuration for terminal block inputs                          | Configures the inverter to accept inputs at the FX/RX terminals.   |
| Multi-function input terminal control configuration                             | Enables the user to improve the responsiveness of the multi-function input terminals.  |

## 4.2 Setting Frequency Reference

| Group     | Code | Name                       | LCD Display  | Parameter Setting | Setting Range | Unit |
|-----------|------|----------------------------|--------------|-------------------|---------------|------|
| Operation | Frq  | Frequency reference source | Ref Freq Src | 0 KeyPad-1        | 0-16          | -    |
|           |      |                            |              | 1 KeyPad-2        |               |      |
|           |      |                            |              | 2 V1              |               |      |
|           |      |                            |              | 4 V2              |               |      |
|           |      |                            |              | 5 I2              |               |      |
|           |      |                            |              | 6 Int 485         |               |      |
|           |      |                            |              | 8 Field Bus       |               |      |
|           |      |                            |              | 12 Pulse          |               |      |
|           |      |                            |              | 13 V3             |               |      |
|           |      |                            |              | 15 V4             |               |      |
|           |      |                            |              | 16 I4             |               |      |

### 4.2.1 V3 Terminal as the Source

You can set and modify a frequency reference by setting voltage inputs when using the V3 terminal. Use voltage inputs ranging from 0 to 10V (unipolar) for forward only operation. Use voltage inputs ranging from -10 to +10V (bipolar) for both directions, where negative voltage inputs are used reverse operations.

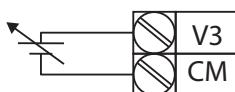

## Chapter 4. Basic Features

### Setting a Frequency Reference for 0–10V Input

Set the Frq (Frequency reference source) code in the Operation group to 13 (V3), and then set code 02 (V3 Polarity) to 0 (unipolar) in the AO group . Use a voltage output from an external source or use the voltage output from the VR terminal(Standard I/O) to provide inputs to V3. Refer to the diagrams below for the wiring required for each application.

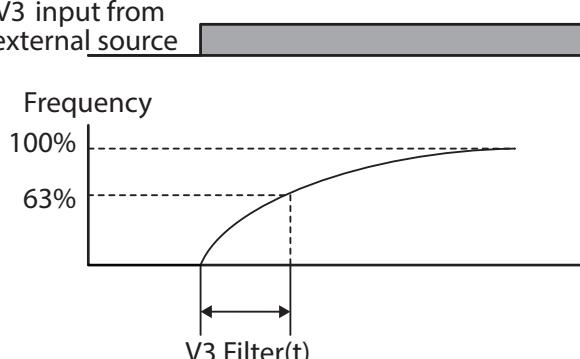

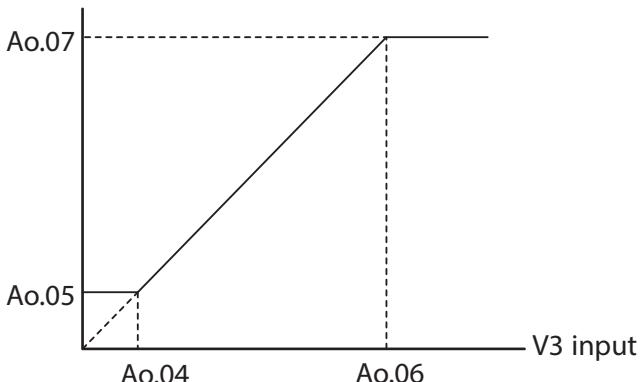

| Group     | Code | Name                              | LCD Display    | Parameter Setting |          | Setting Range       | Unit |
|-----------|------|-----------------------------------|----------------|-------------------|----------|---------------------|------|
| Operation | Frq  | Frequency reference source        | Freq Ref Src   | 13                | V3       | 0–16                | -    |
| In        | 01   | Frequency at maximum analog input | Freq at 100%   | Maximum frequency |          | 0.00–Max. Frequency | Hz   |
| Ao        | 01   | V3 input monitor                  | V3 Monitor [V] | 0.00              |          | 0.00–12.00          | V    |
|           | 02   | V3 polarity options               | V3 Polarity    | 0                 | Unipolar | 0–1                 | -    |
|           | 03   | V3 input filter time constant     | V3 Filter      | 10                |          | 0–10000             | ms   |
|           | 04   | V3 minimum input voltage          | V3 volt x1     | 0.00              |          | 0.00–10.00          | V    |
|           | 05   | V3 output at minimum voltage (%)  | V3 Perc y1     | 0.00              |          | 0.00–100.00         | %    |
|           | 06   | V3 maximum input voltage          | V3 Volt x2     | 10.00             |          | 0.00–12.00          | V    |

**0–10V Input Voltage Setting Details**

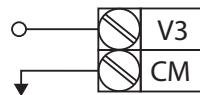

| <b>Code</b>                       | <b>Description</b>   |
|-----------------------------------|--|
| In.01 Freq at 100%                | <p>Configures the frequency reference at the maximum input voltage when a potentiometer is connected to the control terminal block. A frequency set with code In.01 becomes the maximum frequency only if the value set in code Ao.07 (or Ao.13) is 100(%).</p> <ul style="list-style-type: none"> <li>Set code In.01 to 40.00 and use default values for codes Ao.01–Ao.09. Motor will run at 40.00Hz when a 10V input is provided at V3</li> <li>Set code Ao.07 to 50.00 and use default values for codes In.01, Ao.01–Ao.09. Motor will run at 30.00Hz (50% of the default maximum frequency—60Hz) when a 10V input is provided at V3.</li> </ul> |
| Ao.01 V3 Monitor[V]               | Configures the inverter to monitor the input voltage at V3.  |
| Ao.03 V3 Filter                   | <p>V3 Filter may be used when there are large variations between reference frequencies. Variations can be mitigated by increasing the time constant, but this will require an increased response time.</p> <p>The value t (time) indicates the time required for the frequency to reach 63% of the reference, when external input voltages are provided in multiple steps.</p>  <p>[V3 Filter ]</p>   |
| Ao.04 V3 Volt x1–Ao.07 V3 Perc y2 | <p>These parameters are used to configure the gradient level and offset values of the Output Frequency, based on the Input Voltage.</p> <p>Frequency reference</p>  <p>[Volt x1–Ao.07 V3 Perc y2]</p>  |

## Chapter 4. Basic Features

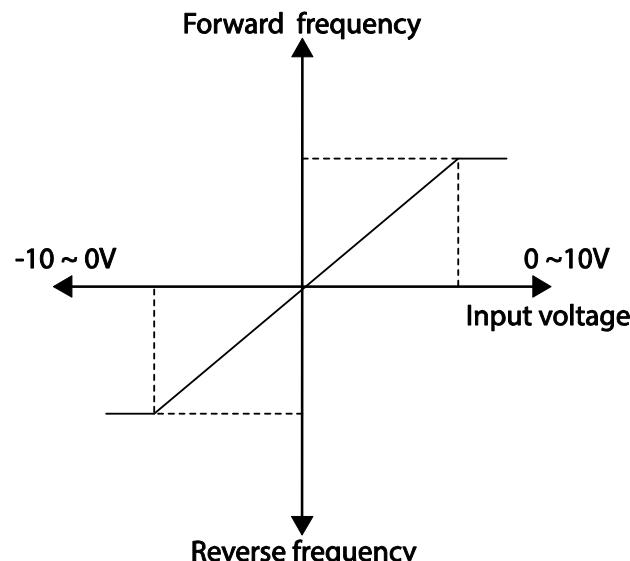

| Code                | Description   |
|---------------------|---|
| Ao.08 V3 Inverting  | Inverts the direction of rotation. Set this code to 1 (Yes) if you need the motor to run in the opposite direction from the current rotation.   |
| Ao.09 V3 Quantizing | <p>Quantizing may be used when the noise level is high in the analog input (V3 terminal) signal. Quantizing is useful when you are operating a noise-sensitive system, because it suppresses any signal noise. However, quantizing will diminish system sensitivity (resultant power of the output frequency will decrease based on the analog input). You can also turn on the low-pass filter using code Ao.03 to reduce the noise, but increasing the value will reduce responsiveness and may cause pulsations (ripples) in the output frequency.</p> <p>Parameter values for quantizing refer to a percentage based on the maximum input. Therefore, if the value is set to 1% of the analog maximum input (60Hz), the output frequency will increase or decrease by 0.6Hz per 0.1V difference.</p> <p>When the analog input is increased, an increase to the input equal to 75% of the set value will change the output frequency, and then the frequency will increase according to the set value. Likewise, when the analog input decreases, a decrease in the input equal to 75% of the set value will make an initial change to the output frequency.</p> <p>As a result, the output frequency will be different at acceleration and deceleration, mitigating the effect of analog input changes over the output frequency.</p> <p style="text-align: center;">Output frequency (Hz)</p> <p style="text-align: center;">Analog input (V)</p> <p>[V3 Quantizing]</p> |

### Setting a Frequency Reference for -10~10V Input

Set the Frq (Frequency reference source) code in the Operation group to 13 (V3), and then set code 02 (V3 Polarity) to 1 (bipolar) in the APO group (Ao). Use the output voltage from an external source to provide input to V3

[V3 terminal wiring]

[Bipolar input voltage and output frequency]

| Group     | Code | Name                              | LCD Display  | Parameter Setting | Setting Range   | Unit |
|-----------|------|-----------------------------------|--------------|-------------------|-----------------|------|
| Operation | Frq  | Frequency reference source        | Freq Ref Src | 13   V3           | 0~16            | -    |

## Chapter 4. Basic Features

### Rotational Directions for Different Voltage Inputs

| Command / Voltage Input | Input voltage |         |
|-------------------------|---------------|---------|
|                         | 0-10V         | -10-0V  |
| FWD                     | Forward       | Reverse |
| REV                     | Reverse       | Forward |

### -10-10V Voltage Input Setting Details

| Code                              | Description   |
|-----------------------------------|---|
| Ao.10 V3-volt x1-Ao.13 V1-Perc y2 | <p>Sets the gradient level and off-set value of the output frequency in relation to the input voltage. These codes are displayed only when Ao.02 is set to 1 (bipolar). As an example, if the minimum input voltage (at V3) is set to -2 (V) with 10% output ratio, and the maximum voltage is set to -8 (V) with 80% output ratio respectively, the output frequency will vary within the range of 6 - 48 Hz.</p> <p>[Ao.10 V3-volt X1-Ao.13 V3 Perc y]<br/>For details about the 0-+10V analog inputs, refer to the code descriptions Ao.10 V3 volt x1-Ao.13 V1 Perc y2..</p> |

### Setting a Reference Frequency using Input Current (I4)

You can set and modify a frequency reference using input current at the I4 terminal after selecting current input at SW 2. Set the Frq (Frequency reference source) code in the Operation group to 16 (I4) and apply 4–20mA input current to I4.

| Group     | Code | Name                              | LCD Display  | Parameter Setting | Setting Range        | Unit |
|-----------|------|-----------------------------------|--------------|-------------------|----------------------|------|
| Operation | Frq  | Frequency reference source        | Freq Ref Src | 16 I4             | 0-16                 | -    |
| In        | 01   | Frequency at maximum analog input | Freq at 100% | 60.00             | 0- Maximum Frequency | Hz   |
| Ao        | 22   | I4 input monitor                  | I4 Monitor   | 0.00              | 0.00-24.00           | mA   |
|           | 23   | I4 input filter time constant     | I4 Filter    | 10                | 0-10000              | ms   |
|           | 24   | I4 minimum input current          | I4 Curr x1   | 4.00              | 0.00-20.00           | mA   |

| Group | Code | Name                             | LCD Display   | Parameter Setting | Setting Range  | Unit |
|-------|------|----------------------------------|---------------|-------------------|----------------|------|
|       | 25   | I4 output at minimum current (%) | I4 Perc y1    | 0.00              | 0-100          | %    |
|       | 26   | I4 maximum input current         | I4 Curr x2    | 20.00             | 0.00-24.00     | mA   |
|       | 27   | I4 output at maximum current (%) | I4 Perc y2    | 100.00            | 0.00-100.00    | %    |
|       | 28   | I4 rotation direction options    | I4 Inverting  | 0 No              | 0-1            | -    |
|       | 29   | I4 Quantizing level              | I4 Quantizing | 0.04              | 0*, 0.04-10.00 | %    |

\* Quantizing is disabled if '0' is selected.

### Input Current (I4) Setting Details

| Code                                  | Description   |
|---------------------------------------|---|
| In.01 Freq at 100%                    | <p>Configures the frequency reference for operation at the maximum current (when Ao.27 is set to 100%).</p> <ul style="list-style-type: none"> <li>If In.01 is set to 40.00Hz, and default settings are used for Ao.24-27, 20mA input current (max) to I4 will produce a frequency reference of 40.00Hz.</li> <li>If Ao.27 is set to 50.00 (%), and default settings are used for In.01 (60Hz) and Ao.24-26, 20mA input current (max) to I4 will produce a frequency reference of 30.00Hz (50% of 60Hz).</li> </ul> |
| Ao.22 I4 Monitor                      | Used to monitor input current at I4.  |
| Ao.23 I4 Filter                       | Configures the time for the operation frequency to reach 63% of target frequency based on the input current at I4.  |
| In.24 I4 Curr x1-<br>In.27 I4 Perc y2 | <p>Configures the gradient level and off-set value of the output frequency.</p> <p>Frequency Reference</p> <p>[Gradient and off-set configuration based on output frequency]</p>  |

### 4.2.2 Setting a Frequency Reference with Input Voltage (Terminal I4)

Set and modify a frequency reference using input voltage at I4 (V4) terminal by setting SW2 to V4. Set the Frq (Frequency reference source) code in the Operation group to 15 (V4) and apply 0-12V input voltage to I4 (=V4, Analog current/voltage input terminal). Codes Ao.14-21 will not be displayed when I4 is set to receive current input (Frq code parameter is set to 16).

## Chapter 4. Basic Features

| Group     | Code | Name                           | LCD Display   | Parameter Setting |    | Setting Range     | Unit |
|-----------|------|--------------------------------|---------------|-------------------|----|-------------------|------|
| Operation | Frq  | Frequency reference source     | Freq Ref Src  | 15                | V4 | 0-16              | -    |
| Ao        | 14   | V4 input display               | V4 Monitor    | 0.00              |    | 0.00-12.00        | V    |
|           | 15   | V4 input filter time constant  | V4 Filter     | 10                |    | 0-10000           | ms   |
|           | 16   | Minimum V4 input voltage       | V4 Volt x1    | 0.00              |    | 0.00-10.00        | V    |
|           | 17   | Output% at minimum V4 voltage  | V4 Perc y1    | 0.00              |    | 0.00-100.00       | %    |
|           | 18   | Maximum V4 input voltage       | V4 Volt x2    | 10.00             |    | 0.00-10.00        | V    |
|           | 19   | Output% at maximum V4 voltage  | V4 Perc y2    | 100.00            |    | 0.00-100.00       | %    |
|           | 20   | Invert V4 rotational direction | V4 Inverting  | 0                 | No | 0-1               | -    |
|           | 21   | V4 quantizing level            | V4 Quantizing | 0.04              |    | 0.00*, 0.04-10.00 | %    |

\* Quantizing is disabled if '0' is selected.

### 4.3 Analog Output

An analog output terminal provides output of 0-10V voltage, 4-20mA current.

#### Voltage and Current Analog Output

An output size can be adjusted by selecting an output option at AO3(Analog Output3) terminal. Set the analog voltage/current output terminal setting switch (SW3) to change the output type (voltage/current).

| Group | Code | Name                    | LCD Display | Parameter Setting |           | Setting Range  | Unit |
|-------|------|-------------------------|-------------|-------------------|-----------|----------------|------|
| Ao    | 30   | Analog output3          | AO3 Mode    | 0                 | Frequency | 0-15           | -    |
|       | 31   | Analog output3 gain     | AO3 Gain    | 100.0             |           | -1000.0-1000.0 | %    |
|       | 32   | Analog output3 bias     | AO3 Bias    | 0.0               |           | -100.0-100.0   | %    |
|       | 33   | Analog output3 filter   | AO3 Filter  | 5                 |           | 0-10000        | ms   |
|       | 34   | Analog constant output3 | AO3 Const % | 0.0               |           | 0.0-100.0      | %    |
|       | 35   | Analog output3 monitor  | AO3 Monitor | 0.0               |           | 0.0-1000.0     | %    |

**Voltage and Current Analog Output Setting Details**

| <b>Code</b>                       | <b>Description</b>   |  |
|-----------------------------------|--|--|
| AO.30 AO3 Mode                    | Select a constant value for output. The following example for output voltage setting.  |  |
|                                   | Setting  | Function   |
|                                   | 0 Frequency  | Outputs operation frequency as a standard. 10V output is made from the frequency set at dr.20(Max Freq)  |
|                                   | 1 Output Current   | 10V output is made from 200% of inverter rated current (heavy load).   |
|                                   | 2 Output Voltage   | Sets the outputs based on the inverter output voltage. 10V output is made from a set voltage in bA.15 (Rated V).<br>If 0V is set in bA.15, 200V/400V models output 10V based on the actual input voltages ( 240V and 480V respectively). |
|                                   | 3 DC Link Volt   | Outputs inverter DC link voltage as a standard.<br>Outputs 10V when the DC link voltage is 410Vdc for 200V models, and 820Vdc for 400V models.   |
|                                   | 4 Torque   | Outputs the generated torque as a standard.<br>Outputs 10V at 250% of motor rated torque.  |
|                                   | 5 Ouput Power  | Monitors output wattage. 200% of rated output is the maximum display voltage (10V).  |
|                                   | 6 Idse   | Outputs the maximum voltage at 200% of no load current.  |
|                                   | 7 Iqse   | Outputs the maximum voltage at 250% of rated torque current<br><i>rated torque current</i><br>$= \sqrt{rated\ current^2 - no\ load\ current^2}$  |
|                                   | 8 Target Freq  | Outputs set frequency as a standard. Outputs 10V at the maximum frequency (dr.20).   |
|                                   | 9 Ramp Freq  | Outputs frequency calculated with Acc/Dec function as a standard. May vary with actual output frequency. Outputs 10V.  |
|                                   | 12 PID Ref Value   | Outputs command value of a PID controller as a standard. Outputs approximately 6.6V at 100%.   |
|                                   | 13 PID Fdk Value   | Outputs feedback volume of a PID controller as a standard. Outputs approximately 6.6V at 100%.   |
|                                   | 14 PID Output  | Outputs output value of a PID controller as a standard. Outputs approximately 10V at 100%.   |
|                                   | 15 Constant  | Outputs OU.05 (AO1 Const %) value as a standard.   |
| AO.31 AO3 Gain,<br>AO.32 AO3 Bias | Adjusts output value and offset. If frequency is selected as an output item, it will operate as shown below.   |  |
|                                   | $AO3 = \frac{Frequency}{MaxFreq} \times AO3\ Gain + AO3\ Bias$ <p>The graph below illustrates the analog voltage output (AO3) changes depend on Ao.31 (AO3 Gain) and Ao.32 (AO3 Bias) values. Y-axis is analog output voltage (0-10V), and X-axis is % value of the output item.</p> |  |

## Chapter 4. Basic Features

| Code              | Description  |
|-------------------|--|
|                   | <p>Example, if the maximum frequency set at dr.20 (Max Freq) is 60Hz and the present output frequency is 30Hz, then the x-axis value on the next graph is 50%.</p> |
| AO.33 AO3 Filter  | Set filter time constant on analog output.   |
| AO.34 A013Const % | If analog output at AO.30 (AO3 Mode) is set to 15(Constant), the analog voltage output is dependent on the set parameter values (0-100%).                          |
| AO.35 AO3 Monitor | Monitors analog output value. Displays the maximum output voltage as a percentage (%) with 10V as the standard.  |

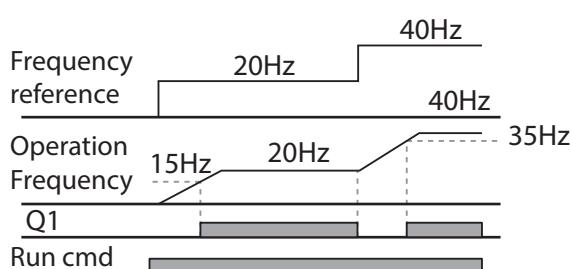

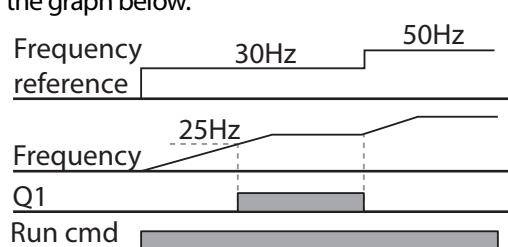

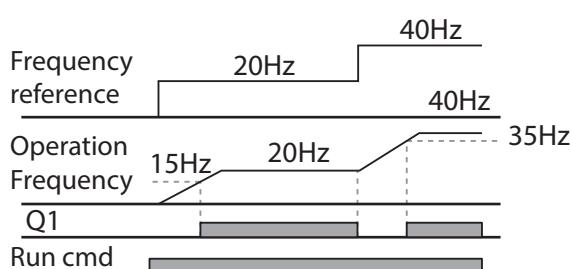

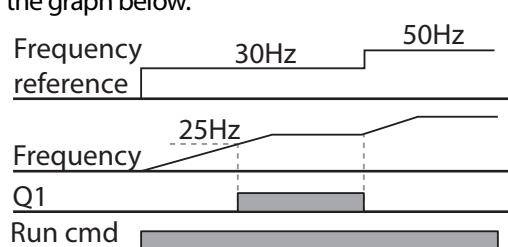

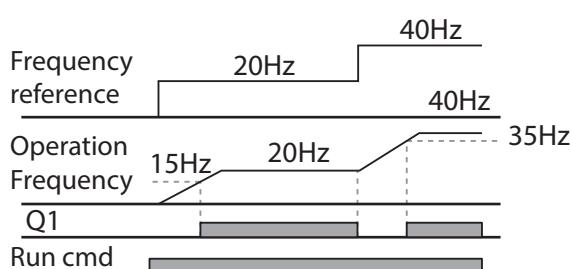

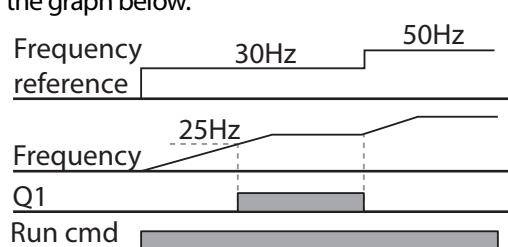

## 4.4 Digital Output

### 4.4.1 Multi-function Output Terminal and Relay Settings

| Group | Code  | Name                          | LCD Display   | Parameter Setting | Setting Range          | Unit |
|-------|-------|-------------------------------|---------------|-------------------|------------------------|------|
| OU    | 30    | Fault output item             | Trip Out Mode | 010*              | -                      | bit  |

## Chapter 4. Basic Features

| Code | Description  |  |   |
|------|--------------|--|---|
|      |              | the graph below.   | <p>The graph illustrates the frequency profile over time. The frequency starts at 30Hz, rises to a peak of 35Hz, and then falls to 25Hz. The width of the frequency transition is 10Hz. The Q1 signal is active during the rise and fall phases. The Run cmd signal is active throughout the entire period.</p> |
| 4    | FDT-4        | <p>Output signal can be separately set for acceleration and deceleration conditions.</p> <ul style="list-style-type: none"> <li>• <b>In acceleration:</b> Operation frequency <math>\geq</math> Detected frequency</li> <li>• <b>In deceleration:</b> Operation frequency <math>&gt;</math> (Detected frequency - Detected frequency width/2)</li> </ul> <p>Detected frequency width is 10Hz. When detected frequency is set to 30Hz, FDT-4 output is as shown in the graph below.</p> | <p>This graph shows the FDT-4 output for a detected frequency of 30Hz. The frequency profile is identical to the one above, but the Q1 signal is active for a longer duration, covering both the acceleration and deceleration phases. The Run cmd signal remains active throughout the entire cycle.</p>       |
| 5    | Overload     | Outputs a signal at motor overload.  |   |
| 6    | IOL          | Outputs a signal when a fault is triggered from a protective function operation by inverter overload inverse proportion.   |   |
| 7    | Underload    | Outputs a signal at load fault warning.  |   |
| 8    | Fan Warning  | Outputs a signal at fan fault warning.   |   |
| 9    | Stall        | Outputs a signal when a motor is overloaded and stalled.   |   |
| 10   | Over voltage | Outputs a signal when the inverter DC link voltage rises above the protective operation voltage.   |   |
| 11   | Low Voltage  | Outputs a signal when the inverter DC link voltage drops below the low voltage protective level.   |   |
| 12   | Over Heat    | Outputs signal when the inverter overheats.  |   |
| 13   | Lost command | <p>Outputs a signal when there is a loss of analog input terminal and RS-485 communication command at the terminal block.</p> <p>Outputs a signal when communication power and expansion an I/O power card is installed, and also outputs a signal when losing analog input and communication power commands.</p>  |   |
| 14   | RUN          | Outputs a signal when operation command is entered and the inverter outputs voltage.<br>No signal output during DC braking.  |   |

| Code | Description    |   |  |
|------|----------------|---|--|
|      |                |                               |  |
| 15   | Stop           | Outputs a signal at operation command off, and when there is no inverter output voltage.                        |  |
| 16   | Steady         | Outputs a signal in steady operation.   |  |
| 17   | Inverter line  | Outputs a signal while the motor is driven by the inverter line.  |  |
| 18   | Comm line      | Outputs a signal while the motor is driven by a commercial power source..                                       |  |
| 19   | Speed search   | Outputs a signal during inverter speed search operation.  |  |
| 22   | Ready          | Outputs signal when the inverter is in stand by operation and ready to receive an external operation command.   |  |
| 28   | Timer Out      | A timer function to operate terminal output after a certain time by using multi-function terminal block input.. |  |
| 29   | Trip           | Outputs a signal after a fault trip   |  |
| 31   | DB Warn %ED    | In case of exceeding DB resistor usage rate, the signal changes to on-state.                                    |  |
| 34   | On/Off Control | Outputs a signal using an analog input value as a standard.   |  |
| 35   | BR Control     | Outputs a brake release signal.   |  |

#### 4.4.2 Fault Trip Output using Multi-Function Output Terminal and Relay

The inverter can output fault trip state using multi-function output terminal (Q1) and relay (Relay 3, 4).

| Group | Code | Name                          | LCD Display    | Parameter Setting |      | Setting Range | Unit |

| OU.34 Relay3                                  | Set relay output (Relay 3).  |   |  |         |        |   |   |            |   |   |         |  |  |          |      |      |      |  |  |  |   |   |  |   |  |  |   |  |  |  |
| OU.35 Relay4                                  | Set relay output (Relay 4).  |   |  |         |        |   |   |            |   |   |         |  |  |          |      |      |      |  |  |  |   |   |  |   |  |  |   |  |  |  |
| OU.53 TripOut On Dly,<br>OU.54 TripOut OffDly | If a fault trip occurs, trip relay or multi-function output operates after the time delay set in OU.53. Terminal is off with the input initialized after the time delay set in OU.54.  |   |  |         |        |   |   |            |   |   |         |  |  |          |      |      |      |  |  |  |   |   |  |   |  |  |   |  |  |  |

### 4.4.3 Multi-function Output Terminal Delay Time Settings

Set on-delay and off-delay times separately to control the output terminal and relay operation times. The delay time set at codes OU.50-51 applies to multi-function output terminal (Q1), relay (Relay 1, 3, 4), except when the multi-function output function is in fault trip mode.

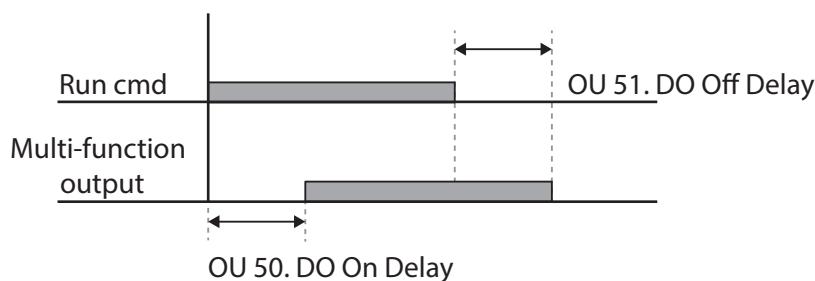

| Group | Code | Name                                  | LCD Display  | Parameter Setting | Setting Range | Unit |
|-------|------|---------------------------------------|--------------|-------------------|---------------|------|
| OU    | 50   | Multi-function output On delay        | DO On Delay  | 0.00              | 0.00-100.00   | s    |
|       | 51   | Multi-function output Off delay       | DO Off Delay | 0.00              | 0.00-100.00   | s    |
|       | 52   | Select multi-function output terminal | DO NC/NO Sel | 00*               | 00-11         | bit  |

\* Displayed as     on keypad. On the 7-seg screen of multi-function output contact parameter, clicking of left/right key switches between extension I/O and built-in I/O 7-seg screen.

    is extension I/O 7-seg screen.

**Output Terminal Delay Time Setting Details**

| Code               | Description  |
|--------------------|--|
| OU.52 DO NC/NO Sel | Select terminal type for relay and multi-function output terminal. An additional three terminal type selection bits at the terminal block will be added when an expansion I/O is added. By setting the relevant bit to 0, it will operate A terminal (Normally Open), and setting it to 1 will operate B terminal (Normally Closed). Shown below in the table are Relay 1 and Q1 settings starting from the right bit. |

**4.5 Setting Multi-step Frequency**

Multi-step operations can be carried out by assigning different speeds (or frequencies) to the Px terminals. Step 0 uses the frequency reference source set with the Frq code in the Operation group. Px terminal parameter values 7 (Speed-L), 8 (Speed-M) and 9 (Speed-H) are recognized as binary commands and work in combination with Fx or Rx run commands. The inverter operates according to the frequencies set with St.1–3 (multi-step frequency 1–3) , bA.53–56 (multi-step frequency 4–7) and the binary command combinations.

| Group     | Code    | Name                          | LCD Display            | Parameter Setting | Setting Range       | Unit |
|-----------|---------|-------------------------------|------------------------|-------------------|---------------------|------|
| Operation | St1-St3 | Multi-step frequency 1–3      | Step Freq - 1–3        | -                 | 0–Maximum frequency | Hz   |
| bA        | 53–56   | Multi-step frequency 4–7      | Step Freq - 4–7        | -                 | 0–Maximum frequency | Hz   |
| In        | 72–74   | Px terminal configuration     | Px Define (Px: P8–P10) | 7                 | Speed-L             | 0–54 |
|           |         |                               |                        | 8                 | Speed-M             |      |
|           |         |                               |                        | 9                 | Speed-H             |      |
|           | 89      | Multi-step command delay time | InCheckTime            | 1                 | 1–5000              | ms   |

## Chapter 4. Basic Features

## 4.6 Multi-step Acc/Dec Time Configuration

Acc/Dec times can be configured via a multi-function terminal by setting the ACC (acceleration time) and dEC (deceleration time) codes in the Operation group.

| Group     | Code  | Name                            | LCD Display               | Parameter Setting | Setting Range | Unit |
|-----------|-------|---------------------------------|---------------------------|-------------------|---------------|------|
| Operation | ACC   | Acceleration time               | Acc Time                  | 20.0              | 0.0–600.0     | sec  |
|           | dEC   | Deceleration time               | Dec Time                  | 30.0              | 0.0–600.0     | sec  |
| bA        | 70-82 | Multi-step acceleration time1-7 | Acc Time 1-7              | x.xx              | 0.0–600.0     | sec  |
|           | 71-83 | Multi-step deceleration time1-7 | Dec Time 1-7              | x.xx              | 0.0–600.0     | sec  |

| In.89 In Check Time | Set the time for the inverter to check for other terminal block inputs. If In.89 is set to 100ms and a signal is supplied to the P8 terminal, the inverter searches for other inputs over the next 100ms. When the time expires, the Acc/Dec time will be set based on the input received at P8. |              |    |    |   |   |   |   |   |   |   |   |   |   |   |   |

## 4.7 Stopping the Acc/Dec Operation

Configure the multi-function input terminals to stop acceleration or deceleration and operate the inverter at a fixed frequency.

| Group | Code  | Name                      | LCD Display          | Parameter Setting | Setting Range | Unit |
|-------|-------|---------------------------|----------------------|-------------------|---------------|------|
| In    | 65-71 | Px terminal configuration | Px Define(Px: P1-P7) | 25                | XCEL Stop     | 0-54 |

## 4.8 Multi-function Input Terminal Control

Filter time constants and the type of multi-function input terminals can be configured to improve the response of input terminals

| Group | Code | Name                                     | LCD Display  | Parameter Setting | Setting Range | Unit |
|-------|------|--|--------------|-------------------|---------------|------|
| In    | 85   | Multi-function input terminal On filter  | DI On Delay  | 10                | 0-10000       | ms   |
|       | 86   | Multi-function input terminal Off filter | DI Off Delay | 3                 | 0-10000       | ms   |
|       | 87   | Multi-function input terminal selection  | DI NC/NO Sel | 0 0000*           | -             | -    |
|       | 90   | Multi-function input terminal status     | DI Status    | 0 0000*           | -             | -    |

\* Displayed as on the keypad. On the 7-seg screen of multi-function input state/contact parameter, clicking of left/right key switches between extension I/O and built-in I/O 7-seg screen. is extension I/O 7-seg screen.

### Multi-function Input Terminal Control Setting Details

| Code                                     | Description   |
|--|---|
| In.85 DI On Delay,<br>In.86 DI Off Delay | If the input terminal's state is not changed during the set time, when the terminal receives an input, it is recognized as On or Off.   |
| In.87 DI NC/NO Sel                       | Select terminal contact types for each input terminal. The position of the indicator light corresponds to the segment that is on as shown in the table below. With the bottom segment on, it indicates that the terminal is configured as a A terminal (Normally Open) contact. With the top segment on, it indicates that the terminal is configured as a B terminal (Normally Closed) contact. From right to left side, there are P1~P7 terminals. In case of installation of extension I/O, P8/P9/P10 terminals are added. |
| In.90 DI Status                          | Display the configuration of each contact. When a segment is configured as A terminal using dr.87, the On condition is indicated by the top segment turning on. The Off condition is indicated when the bottom segment is turned on. When contacts are configured as B terminals, the segment lights behave conversely. From right to left side, there are P1~P7 terminals. In case of installation of extension I/O, P8/P9/P10 terminals are added.  |

| Type       | B terminal status (Normally Closed) | A terminal status (Normally Open) |
|------------|-------------------------------------|-----------------------------------|
| Keypad     |                                     |                                   |
| LCD keypad |                                     |                                   |

| Type       | A terminal setting (On) | A terminal setting (Off) |
|------------|-------------------------|--------------------------|
| Keypad     |                         |                          |
| LCD keypad |                         |                          |

# Chapter 5. Table of Functions

This chapter lists all the function settings for S100 series inverter. Set the parameters required according to the following references. If a set value input is out of range, the following messages will be displayed on the keyboard. In these cases, the inverter will not operate with the [ENT] key.

- Set value not allocated: **rd**
- Set value repetition (multi-function input, PID reference, PID feedback related): **OL**
- Set value not allowed (select value, V2, I2): **no**

## 5.1 Operation Group

The Operation group is used only in the basic keypad mode. It will not be displayed on an LCD keypad. If the LCD keypad is connected, the corresponding functions will be found in the Drive(DRV) group.

**SL:** Sensorless vector control (dr.09)

\***O/X:** Write-enabled during operation, **7/L/A:** Keypad/LCD keypad/Common

| Code | Comm. Address | Name                         | Keypad Display | Setting Range                         | Initial Value   | Property*     | V/F | SL | Ref. |

### 5.4 Expanded Function group (PAR→Ad)

In the following table, the data shaded in grey will be displayed when a related code has been selected.

**SL:** Sensorless vector control (dr.09)

\***O/X:** Write-enabled during operation, **7/L/A:** Keypad/LCD keypad/Common

| Code | Comm. Address | Name                 | LCD Display | Setting Range | Initial Value | Property* | V/F | SL | Ref. |

<sup>23</sup> In case of 0.4~4.0kW, the setting range is 2.0~15.0(kHz).

<sup>24</sup> In case of 0.4~4.0kW, the setting range is 2.0~5.0(kHz).

<sup>25</sup> Displayed when dr.09 is set to 4 (IM Sensorless) and Cn.20 is set to 1 (YES).

<sup>27</sup> Will not be displayed if dr.09 is set to 4 (IM Sensorless).

<sup>28</sup> The initial value 0000 will be displayed on the keypad as

<sup>29</sup> Displayed when any of the Cn.71 code bits are set to 1 and Cn70 is set to 0 (Flying Start-1).

<sup>30</sup> Displayed when any of the Cn.71 code bits are set to 1.

<sup>31</sup> The initial value is 1200 when the motor-rated capacity is less than 7.5 kW

<sup>56</sup> Will not be displayed when an LCD keypad is in use.

## 5.12 2nd Motor Function group (PAR→M2)

The 2nd Motor function group will be displayed if any of In.65-71 are set to 26 (2nd MOTOR). In the following table, the data shaded in grey will be displayed when a related code has been selected.

**SL:** Sensorless vector control (dr.09)

\***O/X:** Write-enabled during operation, **7/L/A:** Keypad/LCD keypad/Common

<sup>57</sup> Displayed when M2.08 is set to 4 (IM Sensorless).

## 5.13 User Sequence group (US)

This group appears when AP.02 is set to 1 (Yes) or CM.95 is set to 2 (P2P Master). The parameter cannot be changed while the user sequence is running.

**SL:** Sensorless vector control function (dr.09)

\***O/X:** Write-enabled during operation, **7/L/A:** keypad/LCD keypad/common

## 5.14 User Sequence Function group(UF)

This group appears when AP02 is set to 1 (Yes) or CM.95 is set to 2 (P2P Master). The parameter cannot be changed while the user sequence is running.

**SL:** Sensorless vector control function (dr.09)

\***O/X:** Write-enabled during operation, **7/L/A:** keypad/LCD keypad/common

## 5.15 Groups for LCD Keypad Only

### 5.15.1 Trip Mode (TRP Last-x)

| Code     | Name                                    | LCD Display    | Setting Range |     | Initial Value | Ref. |
|----------|---|----------------|---------------|-----|---------------|------|
| 00       | Trip type display                       | Trip Name(x)   | -             |     | -             | -    |
| 01       | Frequency reference at trip             | Output Freq    | -             |     | -             | -    |
| 02       | Output current at trip                  | Output Current | -             |     | -             | -    |
| 03       | Acceleration/Deceleration state at trip | Inverter State | -             |     | -             | -    |
| 04       | DC section state                        | DCLink Voltage | -             |     | -             | -    |
| 05       | NTC temperature                         | Temperature    | -             |     | -             | -    |
| 06       | Input terminal state 단자태                | DI Status      | -             |     | 0000 0000     | -    |
| 07       | Output terminal state                   | DO Status      | -             |     | 000           | -    |
| 08       | Trip time after Power on                | Trip On Time   | -             |     | 0/00/00 00:00 | -    |
| 09<br>10 | Trip time after operation start         | Trip Run Time  | -             |     | 0/00/00 00:00 | -    |
| 10       | Delete trip history                     | Trip Delete?   | 0             | No  |               |      |
|          |   |                | 1             | Yes |               |      |

### 5.15.2 Config Mode (CNF)

| Code | Name                        | LCD Display    | Setting Range |                | Initial Value    | Ref. |
|------|-----------------------------|----------------|---------------|----------------|------------------|------|
| 00   | Jump code                   | Jump Code      | 1-99          |                | 42               |      |
| 01   | Keypad language selection   | Language Sel   | 0: English    |                | 0: English       |      |
| 02   | LCD contrast adjustment     | LCD Contrast   | -             |                | -                |      |
| 03   | Multi keypad ID             | Multi KPD ID   | 3-99          |                | 3                |      |
| 10   | Inverter S/W version        | Inv S/W Ver    | -             |                | -                |      |

Warranty period is 12 months after installation or 18 months after manufactured when the installation date is unidentified. However, the guarantee term may vary on the sales term.

## **IN-WARRANTY service information**

If the defective part has been identified under normal and proper use within the guarantee term, contact your local authorized LS distributor or LS Service center.

## **OUT-OF WARRANTY service information**

The guarantee will not apply in the following cases, even if the guarantee term has not expired.

Damage was caused by misuse, negligence or accident.

Damage was caused by abnormal voltage and peripheral devices' malfunction (failure).

Damage was caused by an earthquake, fire, flooding, lightning, or other natural calamities.

When LS nameplate is not attached.

When the warranty period has expired.
